INSPECTION OF COMMERCIAL FEEDING STUFFS

Made for the

STATE DEPARTMENT OF AGRICULTURE

The inspection of commercial feeding stuffs reported in this bulletin was made under the direction of Honorable Andrew L. Felker, Commissioner of Agriculture. Mr. E. D. Sanborn, State Inspector, collected samples of 384 brands of feeding stuffs which were offered for sale in the State during the year ending June, 1936. The 384 samples represent brands of 108 manufacturers.

THE LAW

The New Hampshire law, entitled an Act to Regulate the Sale of Concentrated Commercial Feeding Stuff, requires every manufacturer or dealer who shall sell or offer for sale any concentrated commercial feeding stuff to furnish with each package a clearly printed statement certifying the net weight of the feed contained in the package, the brand name or trademark under which the feed is sold, the name and address of the manufacturer, the ingredients of which the feed is composed, and a chemical analysis stating the minimum percentage only of protein, fat and carbohydrates, and the maximum percentage only of crude fiber.

Manufacturers and jobbers who ship concentrated commercial feeding stuffs into the State are required to register each brand and to pay a license fee. Under the provisions of the law if the shipper fails to register, the dealer is responsible. Feeds manufactured in other states frequently pass through several middlemen before they reach the local distributor. Dealers who purchase feed for resale must assure themselves the brands they purchase are properly registered or assume that responsibility.

In order to secure greater uniformity in the labelling of feeds and in the statement of ingredients, the Association of American Feed Control Officials has adopted definitions and standards. The Association has also approved twenty-one General Regulations which "should be adopted by state officials as far as the statutes will permit." There are no conflicts in these regulations with the New Hampshire Feeding Stuffs Law. All manufacturers and dealers are therefore expected to conform to the regulations of the Association in all matters not specifically mentioned in the law. Copies of these regulations and also the definitions and standards may be obtained from the Secretary, Association of American Feed Control Officials, College Park, Maryland.

A study of the following resolutions of the Association of American Feed Control Officials will make clear to purchasers of feeding stuffs the reasons for a change in the Uniform Label adopted by the Association, omitting the word Carbohydrates.

Resolved that it is the sense of this Association that we understand the term "Nitrogen-Free Extract" to cover the product indicated by the percentage obtained by subtracting from 100 per cent the sum of the percentages of Ash, Moisture, Protein, Fat and Fiber (adopted prior to 1923).

Resolved that the term "carbohydrates" be interpreted to cover the product indicated by the percentages obtained by the addition of the percentages of crude fiber and nitrogen free extract (adopted prior to 1923).

Since the term "carbohydrates" is misleading and combines a maximum guarantee of crude fiber with a minimum guarantee of nitrogen free extract, Be it Resolved, that the use of the term "carbohydrates" on the uniform registration blank and uniform tags be discontinued (adopted 1935).

The New Hampshire Feeding Stuffs Law requires the manufacturer to state the percentage of carbohydrates. However, a statement of the percentage of nitrogen free extract indirectly gives this information, since the sum of the nitrogen free extract and the crude fiber equals the carbohydrates.

The chief purpose of the Feeding Stuffs Law is to protect the consumer against the inferior products which would doubtless soon appear on the market if the trade were not under state control. The law is primarily a correct-labelling act. It must not be assumed by the purchaser of feeding stuffs that every brand which meets the manufacturer's guarantee is a high-grade feed. The Feeding Stuffs Law does not prevent the sale of a low-grade feed if it is properly licensed and tagged and is offered for sale in compliance with the law. It would not be in the public interest to legislate against the sale of the lower-grade by-products. They can be fed profitably if bought at a price adjusted to their feeding value. The law does prevent an inferior feed being offered for sale as a high-grade product.

In purchasing feeds both the dealer and the consumer should specify: The feed delivered on this order must comply with the New Hampshire Feeding Stuffs Law. Do not accept delivery in untagged or unlabelled bags. The dealer who offers for sale a feeding stuff which has not been registered or which is not guaranteed in compliance with the law is probably indifferent to his customer's interests in other respects. He does not merit either the confidence or patronage of the consumer.

The purchaser's co-operation in refusing to buy a feed which does not conform to the law in every respect will not only help in the enforcement of the law but will at the same time afford himself its protection. If the buyer fails to assure himself the legal requirements have been met, he accepts the feeding stuff at his own risk. The State official

charged with the enforcement of the feeding stuffs law is the Commissioner of Agriculture. All inquiries concerning the law and all matters relative to the registration of brands should be addressed to his office in Concord.

CLASSIFICATION

In classifying the feeding stuffs here reported, the class name under which they were offered to the consumer has been used. The classes are arranged alphabetically. Table I shows the number of brands in each class, the page on which the analysis may be found, the average price per 100 pounds, the average per cent of protein, the number of pounds of protein per \$1.00, the number deficient by one-half per cent or more of protein, the average per cent fat, the number of pounds of fat per \$1.00, and the number deficient by one-fourth per cent or more of fat.

The columns pounds of protein per \$1.00 and pounds of fat per \$1.00 are included for the convenience of consumers interested in the comparative cost of protein and fat in the different concentrates. They are not corrected for the varying amounts of the other constituents.

TABLE I

Class	Analyses on page	Number in class	Average price per 100 pounds	Average per cent protein	Pounds of protein per \$1.00	Number deficient 1/2 per cent protein	Average per cent fat	Pounds of fat per \$1.00	Number deficient 1/4 per cent fat

NUMBER OF SAMPLES FAILING TO COMPLY WITH THE LAW

One hundred fifty nine of the 384 brands analyzed failed to comply with the law in every respect, violating it on 202 counts. Nearly all of these violations, however, are negligible if measured in terms of the cost to the purchaser.

Eleven brands were found deficient more than one per cent in the most valuable constituent, protein. These deficiencies were 3.12, 2.94, 2.82, 2.22, 2.15, 1.87, 1.69, 1.38, 1.14, 1.10 and 1.08 per cent. Nine brands were deficient more than one-half per cent but less than one per cent. Eleven brands were deficient less than one-half per cent. The 31 brands found deficient in protein is equivalent to 8.1 per cent of the brands analyzed.

Fifty-three brands or 13.8 per cent were deficient in fat; 21 of these were deficient less than one-fourth per cent. The greatest deficiency in fat was 1.34 per cent.

Forty-seven brands contained an excessive amount of crude fibre. Sixty-nine brands were deficient in carbohydrates. In the analysis of a feeding stuff, the percentage of carbohydrates is usually determined indirectly. It is found by subtracting the sum of the percentages of protein, fat, moisture and ash from 100. It is obvious that an excess of protein and fat over the manufacturer's guarantee decreases the percentage of carbohydrates found. Many of this year's carbohydrates deficiencies are due to the protein or fat or both exceeding the guarantee. Two brands were offered for sale without a carbohydrates guarantee.

In the tabulation of the analytical data, deficiencies of one-half per cent or more of protein and of one-fourth per cent or more of fat are underlined.

In Table II is shown a summary of deficiency figures over an eleven year period.

TABLE II

Year	Per cent Deficient in Protein	Per cent Deficient 1/2 % or more in Protein	Per cent Deficient in Fat	Per cent Deficient 1/4 % or more in Fat	Per cent High in Crude Fiber	Per cent Low in Carbo- hydrates	Per cent with no Carbo- hydrates Guarantee

REQUESTS FOR THE ANALYSIS OF FEEDING

STUFFS BY INDIVIDUALS

Under the Feeding Stuffs Law the Agricultural Experiment Station is charged only with the analysis of samples of feeding stuffs collected by the State Inspector under the direction of the Commissioner of Agriculture. It does, however, each year analyze a considerable number of samples drawn by individuals representing stock purchased by them for their own use. The object of the purchaser who asks to have the sample analyzed is usually to satisfy himself whether the feed meets its guarantee and if it does not, to obtain evidence upon which to base a claim for shortage.

The Station can assume no responsibility for the sampling of these unofficial samples but can only attest the accuracy of the analysis of the sample as submitted. It is practically impossible to secure a representative sample of a feeding stuff composed of several ingredients varying widely in composition without the aid of a sampling tube for drawing the sample and proper equipment for mixing it. A feed may contain as one of its ingredients gluten meal averaging 40 per cent protein, and as another ingredient oat feed averaging five per cent protein. These materials are so different in physical condition that the shaking in transit tends to separate them even though they may have been perfectly mixed by the manufacturer before bagging. It is apparent that an accurate sample of a ton of this feed can only be had by drawing a core from several bags. The official method requires ten. Since a representative sample is as essential as an accurate analysis in judging the value of a shipment of feed, it is evident that a satisfactory adjustment can seldom be effected on the basis of an unofficial sample.

Notwithstanding the objections which may be raised to the analysis of samples taken without proper sampling equipment, the Station is disposed to continue this work as long as there is evidence that it constitutes a useful service. The samples so submitted should be drawn from at least ten bags in a manner which will insure that the small lot sent for analysis is as accurately representative as possible of the larger lot from which it is taken. Because of the cost of labor and materials, an analysis is not usually warranted on a sample drawn from less than a one ton lot of feed.

A one pound sample is sufficient for the analysis. It should be sent in a glass jar or tin box to prevent the loss of fine particles and a change in the moisture content. In order that the Department may have a satisfactory record of the sample analyzed and may know whether or not the manufacturer and the dealer are complying with the requirements of the law, the following information should be submitted concerning each sample.
